

I'm Safe App Set-up

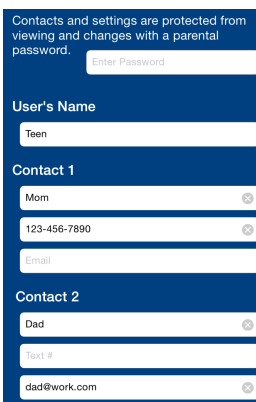

Step 1. Once you've downloaded the app and opened it you'll see this screen. Enter any password you like or if you prefer not to use a password then simply hit "return" on your keyboard to leave blank.

Note for parents: If you are setting up a child's phone you may want to have that password so your child can't make changes to the notifications list.

Step 2. For the App to generate a text with a link to the user's location on a map you must OK use of current location.

Step 3. "User's Name" Enter the name of the user of the phone the app is being installed on. This can be a first name, nickname, etc. "Teen" is shown in this example.

Step 4. "Contact 1-5" Enter a name and text number or email or both. You can enter up to 5 contacts and have the choice of using text, email or any combination.

Step 5. Scroll back to the top and press "Done"

Privacy Note: The App will generate a group text or email, not an individual one for each recipient. You can add any text to the auto-generated message but keep in mind that it goes to each person on your list.
